

CHAPTER 2

Prevalence of Renal Replacement Therapy for End Stage Kidney Disease

Summarising the number of prevalent renal replacement therapy patients in Australia and New Zealand, the prevalence rate per million population and the demographics and clinical characteristics of prevalent patients

All Renal Replacement Therapy Modalities

Table 2.1 shows the number of prevalent patients treated with renal replacement therapy in Australia and New Zealand over the last 20 years. The prevalence rate per million population (ppm) is also shown. The prevalence of renal replacement therapy continues to grow in both countries. Table 2.2 shows the same data for the last 5 years, but with dialysis modality categorised.

Population estimates for Australia and New Zealand used throughout this chapter for the calculation of prevalence per million population were sourced from the Australian Bureau of Statistics (2017)¹ and Stats NZ (2017)².

Table 2.1 Prevalence (ppm) of Renal Replacement Therapy 1998-2017

Year	Australia			New Zealand		
	Dialysis	Transplant	Total	Dialysis	Transplant	Total

	Proportion PD	32%	31%	29%	30%	31%

Table 2.3 and figures 2.1-2.2 show the 2017 prevalence (pmp) of RRT by age groups. In both countries the modal age group was 55-64, although the highest prevalence rates were in the 65-74 year-old group in New Zealand and the 75-84 year old group in Australia. The prevalence in the 75-84 and 85+ age groups was substantially higher in Australia than in New Zealand.

Table 2.3 Prevalence (pmp) of Renal Replacement Therapy by Age 2017

Age	Australia	New Zealand
0-4	30 (19)	9 (29)
5-14	179 (58)	34 (54)
15-24	524 (164)	98 (146)
25-34	1173 (319)	313 (463)
35-44	2495 (765)	489 (840)
45-54	4579 (1437)	958 (1504)
55-64	5961 (2099)	1263 (2218)
65-74	5801 (2693)	1113 (2673)
75-84	3354 (2926)	354 (1598)
85+	642 (1299)	27 (317)

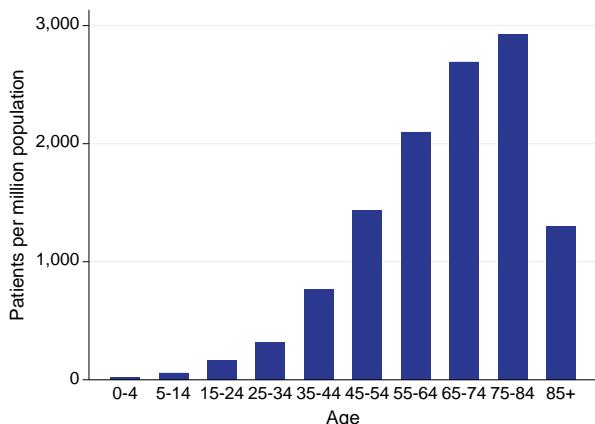

Figure 2.2.1 - Prevalent RRT Patient Numbers - New Zealand - 31 December 2017

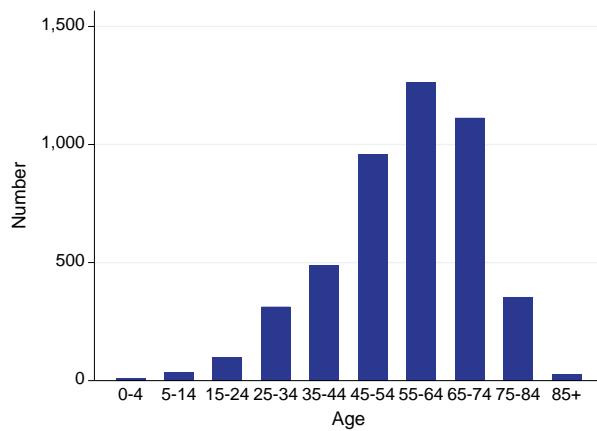

Figure 2.2.2 - Prevalent RRT Patients Per Million Population - New Zealand - 31 December 2017

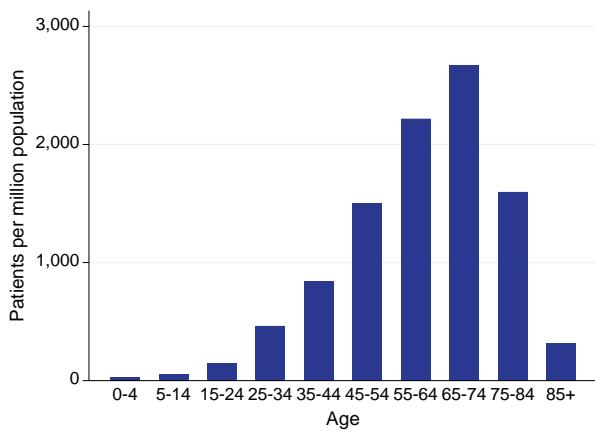

Table 2.4 shows the prevalence (pmp) of RRT by state over 2013-2017. In Australia at the end of 2017 the Northern Territory had the highest prevalence of dialysis patients and Tasmania the lowest; the Australian Capital Territory had the highest prevalence of transplant patients and New South Wales the lowest.

Table 2.4 Prevalence (ppm) of Renal Replacement Therapy by State 2013-2017

Modality	State	2013	2014	2015	2016	2017

Figure 2.3 shows the overall distribution of RRT modality by country at the end of 2017. The dialysis modalities are shown separately in figure 2.4. A substantially higher proportion of New Zealand dialysis patients receive dialysis at home (either PD or home HD) than in Australia. A higher proportion of patients on renal replacement therapy in Australia have a functioning renal transplant than in New Zealand.

Figure 2.3 - RRT Modality by Country 2017

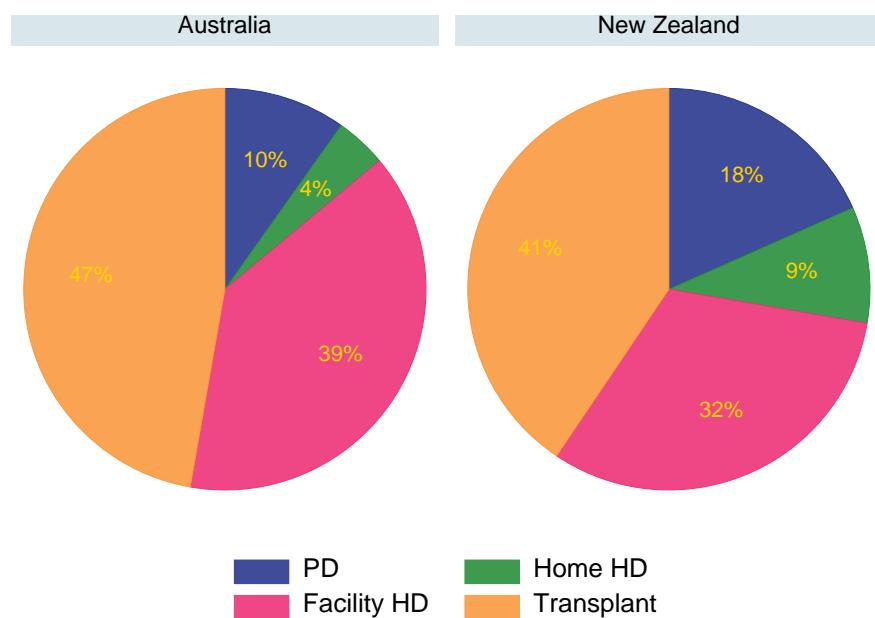

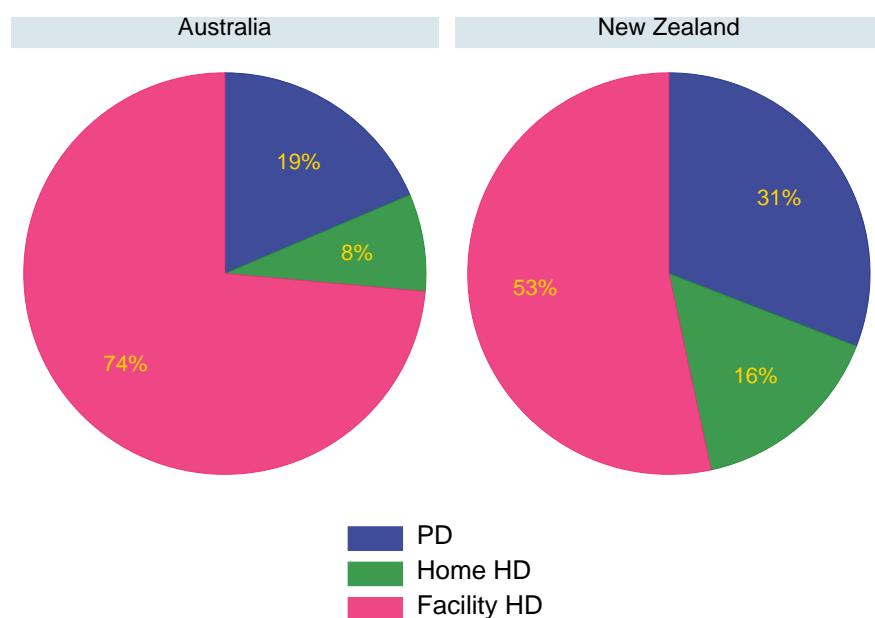

Figure 2.4 - Dialysis Modality by Country 2017

Figures 2.5 and 2.6 show the same data by state. There was substantial variation in the types of RRT received between states; in particular, in the Northern Territory the large majority of patients were receiving satellite HD.

Figure 2.5 - RRT Modality by State - 31 December 2017

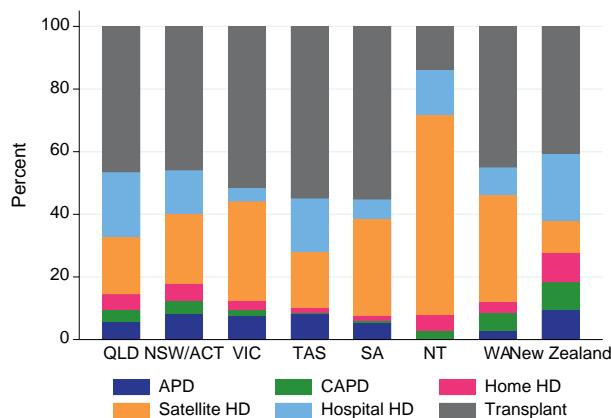

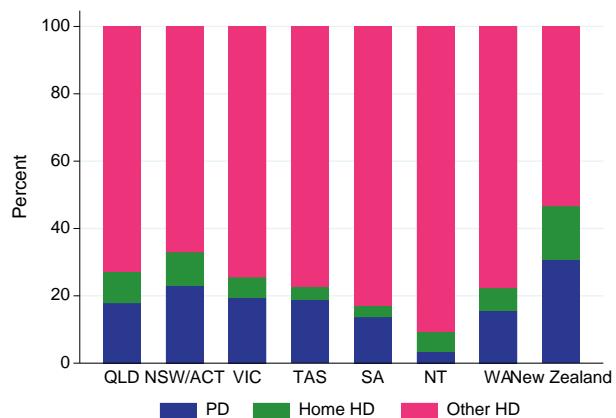

Figure 2.6 - Dialysis Modality by State - 31 December 2017

Dialysis

Table 2.6 and figures 2.7-2.8 show the age distribution of prevalent dialysis patients in 2017. The dialysis population in New Zealand is slightly younger than that of Australia.

Table 2.6 Dialysis Prevalence (pmp) by Age - 2017

Age	Australia	New Zealand
0-4	11 (7)	4 (13)
5-14	29 (9)	10 (16)
15-24	146 (46)	49 (73)
25-34	461 (125)	163 (241)
35-44	962 (295)	281 (483)
45-54	1942 (610)	503 (789)
55-64	2794 (984)	724 (1272)
65-74	3294 (1529)	734 (1763)
75-84	2801 (2444)	277 (1250)
85+	611 (1236)	23 (270)

		Total	1763	1867	1913	1926	1913

Co-morbidities

Figure 2.10 shows trends in the prevalence of co-morbidities (with 95% CIs) in prevalent RRT patients over the last 10 years. In general, the rates of these co-morbidities appear to be falling over time, with the exception of lung disease in New Zealand.

Figure 2.11 shows the prevalence of diabetes. Although the majority of prevalent RRT patients are non-diabetic, there is a strong trend in both countries towards a higher percentage of patients with type II diabetes.
